Get Rid of Wastes Safely

Every time you examine a person's mouth, fill a cavity, or extract a tooth, you are left with some waste. For example, used cotton or gauze, disposable needles and syringes, plastic gloves, and other materials must be thrown away. But do not put them in the trash. These wastes carry germs and can spread infections to you and to people in the family and community. Wear gloves when you touch wastes, and get rid of them carefully.

HOW TO DISPOSE OF SHARP WASTES

Sharp wastes must be put into a container so they will not injure anyone who finds them. A container made of metal or heavy plastic, with a lid or tape to close it, works well.

When the container is half full, add 5% bleach solution, then seal it closed and bury it deep in the ground.

Make a box to dispose of needles safely

Find a metal or hard plastic box. Make a long hole in the lid of the box that is wide on one side and gets narrower on the other side.
When you have finished using a disposable syringe, put the needle into the box and slide it down to the narrowest point.

Then pull up on the syringe and the needle will fall off into the box. The plastic syringe can be disinfected and thrown into a waste pit (see below).

When the box is half full, pour 5% bleach solution into the box, seal it closed, and then bury it deep in the ground.

OTHER WASTES
Other wastes, like plastic gloves, syringe barrels, or cloth soaked in blood, should be disinfected and then buried deep in the ground. You can disinfect them by soaking them in bleach for 20 minutes.

**WARNING:** Do not burn plastic gloves, syringes, or any other plastics. Burning plastic wastes is dangerous—when plastic burns, it makes smoke and ash that is very poisonous.

BURYING WASTES
Find a place away from where people get their drinking water and away from where children play. Dig a safe waste pit to bury wastes.
The Dental Kit

In the next 10 pages, there are lists of medicines, instruments, and other supplies recommended in this book. Keep them together in a kit. **You may want to change some of them, or add others to meet your own needs.**

As a dental worker, you will be able to get many of the items on the lists from your government medical stores. Some things you will have to buy yourself. That can be expensive, so we make several suggestions to help you save money.

Before you order, decide how many of each thing you need. Ask yourself: How many persons do I treat each day? For what problems? Then order enough medicines and supplies for three months.

**Note:** As more people learn about the treatment you can give, more will come to ask for your help. Remember this when you order. Remember, also, that some persons may need more than one treatment.

On pages 208, 210, and 211 we give examples. We recommend how many medicines, supplies, and instruments you will need if you see 10 people a day—200 a month. You cannot be exact, of course, because you cannot predict exactly what problems will arise. However, we can say that, **on the average:**

In a group of 10 persons with urgent problems:
- 6 persons need you to take out 1 or more teeth (so you must inject)
- 2 persons need cement fillings
- 2 persons need medicine before you can treat them.

Many of these persons must return for another visit:
- 5 persons need you to scale their teeth and teach them how to care for them better
- 1 person will need a cement filling
- 2 persons will need treatment after taking medicine.
Another antibiotic, tetracycline, is not recommended for most of the treatments in this book because it is a broad-spectrum antibiotic. Narrow spectrum antibiotics (see “Antibiotic,” page 223) are usually safer and just as effective for most dental problems. If you do use tetracycline, read page 355 of Where There Is No Doctor and remember, do not give tetracycline to a person who is pregnant or breastfeeding, or to a young child. Tetracycline can make young, developing teeth turn dark.

SUGGESTIONS:

1. Compare prices before you buy medicines. Often the same medicine has many different names. The generic name (the name we use on this page) usually is cheapest, and the medicine is just as good as the brand-name medicines. Use the generic name to order and buy, not the brand name.

2. Always look for a date on the package. It is called the expiration date (or expiry date). If today is later than that date, do not buy or use that medicine.

3. Be careful to give the correct dose. Read the next 2 pages carefully, as well as the Treatment section of each problem in Chapter 7. If pages 209 and 210 are not clear to you, read Chapter 8 (pages 59 to 64) of Where There Is No Doctor.

4. For serious infections, see page 210.
THE CORRECT DOSE

Before you give medicine, think about the sick person’s weight and age. Smaller bodies, and especially children, usually need less medicine. Tablets can be divided (broken) to make smaller doses:

**Four times a day:**

- **Adults** take 2 tablets
- **Children 8 to 12 years** take 1 tablet paracetamol
- **Children 3 to 7 years** take ½ tablet paracetamol
- **Babies** take paracetamol only, ¼ tablet

**Note:** Do not hold aspirin on a bad tooth. Aspirin has acid that can hurt the tooth. Always swallow aspirin immediately. **For severe pain,** when aspirin does not help, an adult can take 30 mg of codeine 4 to 6 times a day, as needed. Use paracetamol (acetaminophen) instead of aspirin for children under 12 years, especially for babies or for children with flu signs. Aspirin can be dangerous for them and for people with asthma.

ANTIBIOTICS: TO FIGHT INFECTION

Antibiotics kill bacteria that cause infections. Some antibiotics work better against certain bacteria than others. If you can, test the pus to find which antibiotic will work best.

Ask about a person’s allergies before you give antibiotics. **If someone is allergic to an antibiotic, do not give them that antibiotic or any antibiotics from the same “family.”** For example, someone who is allergic to penicillin should not be given amoxicillin, which is in the same family. For more information about families of antibiotics, see *Where Women Have No Doctor*, page 480.

If you give antibiotics by injection, stay with the person for 30 minutes after injecting to watch for signs of allergic shock. If you see any of these signs...

- itchy rash or flushing of skin
- swelling of lips, tongue, or throat
- difficulty breathing
- loss of consciousness

...immediately inject epinephrine (1 mg/ml medicine) in the thigh: ½ ml for adults or ¼ ml for children. If needed, give a second dose 5 to 15 minutes after the first, and a third dose 5 to 15 minutes after that. Do not give more than 3 doses. For more information on allergic shock, see *Where There Is No Doctor*, pages 70 to 71.

**Always give the full dose of any antibiotic,** even if the person feels better.
INJECTIONS: FOR SEVERE INFECTIONS

It is always safer to take medicine by mouth. Sometimes, however, an infection is so bad that you need to give medicine by injection. **Learn how to give injections from an experienced health worker.** The injections described on this page are not like the anesthetic injections in Chapter 9 of this book—you must inject these medicines into a large muscle in the buttocks or arm. For more instructions on this kind of injection, see Chapter 9 (pages 65 to 74) of *Where There Is No Doctor.*

**For severe infection:** There are 2 kinds of penicillin to inject.

<td>141</td>
</tr>
</tbody>
</table>

**FLUORIDE**

You can use a special solution of fluoride (if available) or any fluoride toothpaste, which is much cheaper and more common (see above, number 7), in 2 ways:

**To treat a sensitive tooth:** Put cotton rolls between the lip and gum on each side of the bad tooth. Dry the bad tooth with cotton and look for the small groove that is causing the pain. Cover the groove with a smear of fluoride toothpaste and tell the person not to spit or rinse it out for several minutes. One week later, give the same treatment again, or give the person enough fluoride toothpaste to do it at home.

**To help prevent cavities** in children who do not clean their teeth with fluoride toothpaste, once a week have children bring their toothbrushes or toothsticks to school. Put some fluoride toothpaste on each child’s brush or stick and have them brush and coat their teeth, leaving the paste in their mouths for at least one minute. Then they can spit it out. They should not eat or drink for 30 minutes.
SUGGESTIONS:
If you order your supplies in bulk long before you need them, you probably will pay lower prices. If you have a place to store supplies that is clean, dry, and free from cockroaches and rats, consider ordering enough for one year instead of only 3 months.

### Weights

- **1 kilogram (kg)** equals **10 x 100 grams (g)**
- **1 kilogram** = **1000 grams**
- **1 gram** = **1000 mg**

INSTRUMENTS

When you are treating several people on the same day, you will need to clean and disinfect or sterilize some instruments (see pages 87 to 91) at the same time that you are using others. Therefore, it is necessary to have several of each kind of instrument, to be sure that the instrument you need will be ready (disinfected or sterile) when you need it.

There are 3 instruments you will need for each person who comes to you, no matter which treatment is needed. They are: a mirror, probe, and cotton pliers. Keep them together. Below we recommend that you have 15 of each of these, so you can keep one in each treatment kit. **You do not need to buy all of these instruments.** You can make several of them—see pages 214 to 216. If you like, buy only one example of each of the instruments below, and use them as models to copy when you make your own extra instruments.*

MAKING YOUR OWN DENTAL INSTRUMENTS*

Here are a few ideas for making instruments at low cost. Try to use materials that are available where you live.

Can you think of any other materials you can use?

Each instrument has two parts: a handle and a working piece at the end. Join them together:

... with wire:

... with glue or even wax:

If you make the end flat, it can prevent the working piece from turning. Pound the working piece with a hammer and make a flat slot in the handle so the working piece cannot turn.

*I am grateful to Aaron Yaschine for the ideas in this section.
MAKING THE THREE INSTRUMENTS YOU USE MOST

**Mirror:** Use old pieces of mirror or a shiny piece of tin. You even can use a polished silver coin. A tongue depressor is the handle.

**Probe:** Use the end of a paper clip, pin or needle for the working piece. Rub it against a smooth stone to sharpen it. Bend it so it can reach around to the back of a tooth. Attach the working piece to a smooth stick handle (page 214).

**Tweezers:** Draw the shape on a piece of tin and then cut it out with strong scissors. Use a file or a smooth stone to make the edges smooth. Bend in half to make the tweezers.
MAKING OTHER INSTRUMENTS AND SUPPLIES

Spoon: Bend a paper clip or needle. Flatten the end. Then pound a small stone against the end, to make it hollow. Make 2 bends and attach to a stick handle.

Filling Tool: Remove the heads from 2 long screws. With a file and hammer, make the end of one screw flat and the end of the other screw round. Bend each end in the direction of the edge (not the face) of the flat side. Attach both working pieces to a small stick handle.

Dental Floss: When using string to clean between your teeth (pages 71 to 72), you may have trouble getting this string down in between your teeth. Sometimes, also, the string gets caught there, forming a kind of “bird’s nest.” Three things can cause problems with dental floss:

1. An incorrectly made filling—flat and rough instead of round and smooth. Replace the filling.

2. Teeth too tight together. Use the floss on a tooth. Then pull the string out from between the teeth as you press the free end down against the gum with the fingers of your other hand. If there is a sharp filling on a tooth, the string will pass under the filling as it comes free.

3. String that is too thick. Make thinner but stronger floss by waxing as in this picture. The wax also will make the floss easier to slide between your teeth.
BUYING DENTAL SUPPLIES

When you do not have much money, you must spend wisely. Dental instruments are very expensive, especially when you buy them at commercial prices. Ask other health workers in your area where you can get instruments at lower prices. You can also try contacting the national dental association in your country. If you do not know how to locate your national dental association, contact the World Dental Federation:

**FDI World Dental Federation**
Chemin de Joinville 26, 1216 Geneva-Cointrin SWITZERLAND
tel: 41-22-560-81-50
e-mail: info@fdiworlddental.org
website: www.fdiworlddental.org

There are many organizations that donate health supplies—including dental instruments—or that distribute them at low cost. Some of these organizations prefer to help church-sponsored health projects, but others will provide instruments to anyone who needs them.

Durbin, a company in England, may sell the instruments mentioned in this book at lower than commercial prices. For more information, contact:

Records, Reports, and Surveys

For record keeping, you can divide the mouth into 4 parts:

- Upper Right (UR)
- Upper Left (UL)
- Lower Left (LL)
- Lower Right (LR)

In each part there are 8 teeth (fewer in children—see page 43).

You can call each tooth by its short name, for example, UR3.

Keep a record of each person you see. Write some brief information about the person and the problem. This way, if the person returns, you remember what you did to help.

When a person needs to come more than once to take care of a problem, it is better to keep a special record for that person. With all the treatments on one page, you can follow that person’s progress more easily. Below is an example for a person named Yupere. Yupere has a bad tooth that has hurt from time to time for 2 months. One day when he woke up, his face was swollen. Yupere decided to wait a day to see if the swelling would go away. The next day it was worse, so he went to the medical post for treatment.
Reports
You need to write a report whenever you send a person for medical help. Give as much information as possible so that your treatment can continue and new treatment starts as quickly as possible. If you cannot go along, always send a report with a sick person.

The story of Niame: After drinking for several hours, Niame’s husband returned home asking for money. She had none and told him so. He did not believe Niame, so he beat her with his hands and then a knife. Naime’s friends carried her, unconscious and bleeding, to the aid post. The front part of her lower jaw was hanging out of position.

Patient: Naime Pato, 25 years

Diagnosis: Cuts and a broken jaw

This lady was beaten by her husband tonight. I saw her at 10:30 P.M. and treated her by:

1. Suturing the cuts on her face.
2. Giving tetanus toxoid 0.5ml.
3. Giving Procaine Penicillin 1,200,000 units
4. Giving aspirin 2 tablets
5. Making a head bandage to support her jaw.

Please treat her broken jaw later. I am help her at home with a special diet.

Sincerely,
Nisa Stephen
Aid Post orderly
Surveys
It is a good idea to know how many persons in your community have cavities and gum disease. Look in the mouths of children and adults and make a record of what you see. Here is an example that is used in Mozambique:

Put a line through the circle for each person with:

- cavities Ø
- red, swollen gums Ø

The dental workers in Mozambique do a quick survey in 2 schools, 2 mother-and-child health clinics, and 2 cooperatives or factories in their community.

In each place, they examine 50 persons. This is enough to give an idea of the general health of teeth and gums in the community.

They make a paper for each age group. Each paper has 3 sections. They make a mark for each person they see, until all 50 circles have marks in them. They make extra marks if they see a tooth and/or gum problem.

In this example, you can see that children have more problems with cavities, while adults suffer more from gum disease. This is often true.

This survey helps the dental worker in three ways:

1. it shows how serious tooth decay and gum disease are in the community.
2. it shows which age group is suffering the most. To these people the dental worker must plan to give the most attention.
3. it gives the dental worker something to show the people when they are discussing why to change some old habits and adapt some new ideas.

VOCABULARY

This vocabulary is listed in the order of the alphabet:

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

Most names of sicknesses are not in this vocabulary. Find the name of a sickness in the Index and read about it in the book.

There are many words in this vocabulary that are not in the rest of the book, but you may see them in other books or hear dentists use them.

A

Abscess A sac of pus caused by an infection. For example, a boil.

Acid A strong liquid that is produced from certain foods left in the mouth. Acid causes both tooth decay and gum disease.

Acute Sudden and short-lived. An acute illness is one that starts suddenly and lasts a short time. The opposite of chronic.

Adrenaline Also called epinephrine. A drug which stimulates the heart, used for severe allergic shock.

Adult teeth See Permanent teeth.

Allergy A bad reaction after breathing in, eating, touching, or being injected with something. The reaction may be itching, sneezing, or difficult breathing.

Analgesic Medicine to calm pain. Aspirin, paracetamol (acetaminophen), ibuprofen, and codeine are all analgesics.

Amalgam A special metal used in permanent fillings.

Anemia A disease in which the blood gets thin. Signs include tiredness, pale skin, and lack of energy.

Anesthetic A drug that causes the mouth or other part of the body to feel numb.

Antibiotic Medicine that fights infections caused by bacteria. A broad-spectrum antibiotic such as tetracycline kills many kinds of bacteria, while a narrow-spectrum antibiotic like penicillin kills only a few kinds of bacteria.

Appropriate Something that is the easiest, safest, and most likely to work in a particular situation or condition.

Arkansas stone A special stone used to sharpen dental instruments.

Aspirate To breathe. An aspirating syringe is one that can “breathe,” or allow liquid to go both in and out of the needle tip.

B

Baby teeth The first set of teeth. There are 20 baby teeth, which are also called milk teeth or primary teeth.

Bacteria Tiny germs that you can only see with a microscope and that cause many different infectious diseases.

Beeswax Wax made by honey bees.

Bicusps The teeth between the canine teeth and the molars; premolars.

Bite (1) To cut with the teeth. (2) The way the upper and lower teeth fit together when they close.

Blood pressure The force, or pressure, of the blood flowing through the blood vessels (veins and arteries).

Blood vessels Tubes that carry blood through the body. Veins and arteries.

Boil (1) To heat water until it bubbles. (2) A swollen, inflamed lump with a pocket of pus under the skin. A kind of abscess.

Brand name Trade name, the name a company gives to its product. A brand-name medicine is sold under a special name and is often more expensive than the same generic medicine.

Bridge False teeth that are glued onto several nearby healthy teeth.

Buccal Of the cheek. The buccal face of a tooth is the side facing the cheek.

Bulk Large quantity or amount.

C

Calcium A nutritional element which makes teeth strong and hard.

Calculus Tartar.

Calories Units of heat found in food, giving energy for the body to use.
Cancer  A tumor or lump that grows and may keep growing until it causes death.

Canine teeth  Also called cuspids, dog teeth, and eye teeth. These teeth have the longest roots of any tooth.

Carbohydrates  Starches and sugars—foods that give energy. In this book they are called GO foods.

Caries  Cavities; tooth decay.

Cavity  A hole in a tooth where bacteria have entered.

Cement filling  A temporary filling, which may protect a tooth for up to 6 months. Also see Filling.

Cementum  The outer covering of the tooth’s root.

Chronic  Long-term or frequently recurring (compare with “acute”). A chronic disease is one that lasts for a long time.

Colony  Germs grouped together in one place.

Contagious disease  A sickness that can be spread easily from one person to another.

Contraindication  A situation or condition when a particular medicine should not be taken, or a certain treatment not given. For example, many medicines are contraindicated during pregnancy.

Crown  The top 1/3 of the tooth, the part that is protected with hard enamel.

Curette  A scaling instrument.

Cuspids  Canine teeth.

Cyst  An abnormal, sac-like growth in the body which is often filled with water.

Decay  See Tooth Decay.

Dentition  A whole set of teeth.

Dental floss  See Floss.

Dental worker  A health worker who works for healthy teeth and gums.

Dentist  A professional who has advanced formal education in care of teeth and gums.

Dentures  False teeth.

Diagnosis  A decision made by a health worker about what a person’s illness is.

Diet  The kinds and amounts of foods that a person should eat or avoid eating.

Dislocation  A bone that has slipped out of place at a joint.

Distal  The side of the tooth that faces the back of the mouth. The opposite side from the mesial side.

Drill  An instrument used to change the shape of a cavity before placing a filling.

Duct  A tube that carries liquid. For example, ducts carry spit from the spit gland to the mouth.

Elevator  An instrument used to loosen a tooth before you take it out.

Enamel  The protective layer that covers the crown (top part) of a tooth. The enamel is the hardest part of the body.

Epulis  A tumor of the gums, usually found between the teeth.

Eruption  The moment when a new tooth cuts through the gums and becomes visible in the mouth.

Evaluation  A study to find out the value of something, or to find out what has been accomplished. Evaluations often compare different conditions before and after a new activity begins.

Examination  A careful look at something; an investigation.

Expiration date  The month and year marked on a medicine that tells when it will no longer be good. Throw away most medicines after this date.

Explorer  See Probe.

Extraction  Taking out a tooth.

False tooth  A tooth made of plastic or other material, used to replace a tooth that has been taken out.

Fever  A body temperature higher than normal.

Fiber  A fine, threadlike piece. A fibrous food like coconut contains a lot of fiber.

Filling  Material put into the cavity in a tooth to prevent further decay.

First aid  Emergency care or treatment for someone who is sick or injured.

Floss  Special string used to clean between the teeth.

Fluoride  A chemical which strengthens the teeth. Painted on the teeth, as an ingredient in toothpaste, or added to water for drinking or rinsing, fluoride enters and hardens the enamel. It is especially good for children’s teeth.

Forceps  Instruments used to pull teeth.

Fracture  A broken bone.
G

Gauze A material made of cotton, woven into an open mesh.

Generic name The scientific name of a medicine. Usually different from the brand names given it by the different companies that make it.

Germs Very small organisms that can grow in the body and cause some infectious diseases; bacteria.

Gram A metric unit of weight. There are about 28 grams in an ounce. A paper clip weighs about 1 gram.

Groove A long, narrow cut on the surface of back teeth. Grooves are ‘protected areas’ because food and germs can hide and remain in them longer.

Gum bubble Also called a gum boil. A small abscess on the gums.

Gum disease Illness that causes gums to become loose, red, and swollen, and to bleed when the teeth are cleaned.

Gum pocket The space between the tooth and the flap of gums around it, forming a small pocket.

Gums The skin around the teeth.

H

Hemorrhage Bleeding.

Hemostat A needle holder, used for putting in sutures.

Herb A plant, especially one valued for its medicinal or healing qualities.

History (Medical history) What you can learn through asking questions about a person’s sickness—how it began, when it gets better or worse, what seems to help, whether others in the village or family have it, etc.

Hydrogen peroxide A liquid used to clean wounds and kill certain bacteria.

Hypertension High blood pressure.

I

Immunizations (vaccinations) Medicines that give protection against specific diseases. For example, there are immunizations against diphtheria, tetanus, polio, tuberculosis, and measles.

Incisors The four front teeth on the top and bottom.

Infection A sickness caused by bacteria or other germs. Infections may affect part of the body only (such as a sinus infection) or all of it (such as measles).

Infectious disease A disease that is easily passed from one person to another; contagious disease.

Inflammation An area that is red, hot, and painful, often because it is infected.

Inject To give a medicine such as an immunization or anesthetic, using a syringe.

J

Joint The place where two bones meet.

K

Kilogram (kg) One thousand grams. One kilogram (a “kilo”) weighs a little more than 2 pounds.

Labial Of the lips. The labial side of a tooth is the face of the tooth nearest the lips.

Ligature wire A thin, strong wire that bends easily, used to attach a loose tooth to a strong tooth.

Lingual Of the tongue. The lingual side of a tooth is the face of the tooth nearest the tongue.

M

Malnutrition Health problems caused by not eating enough of the foods that the body needs.

Mandible The lower jaw bone.

Maxilla The upper jaw bone.

Mesial The side of the tooth that faces the front of the mouth; the opposite of distal.

Milligram (mg) One thousandth of a gram.

Molar The back teeth, used for grinding. Molars are the largest teeth in the mouth, with 2 or even 3 roots each.
N

Nerves Thin threads or strings that run from the brain to every part of the body and carry messages for feeling, pain or movement. There is a nerve, along with a blood vessel, in every root of every tooth.

Numb Without feeling; anesthetized. When teeth and the gums around them are numb, they cannot feel pain.

Nutrition The mixture of foods the body needs to grow, be healthy, and fight off disease.

O

Occlusal The biting surface, or top, of the tooth.

Oral Of the mouth. An oral medicine is one taken by mouth.

Organisms Living things (animals or plants).

P

Palate The roof or top part of the mouth.

Permanent filling A filling using a special metal or ceramic material which lasts for years.

Permanent teeth The 32 adult teeth which grow into the mouth to replace the baby teeth.

Petroleum jelly (petrolatum, Vaseline) A grease-like jelly used in preparing skin ointments.

Plaque A film or coating of germs that can form on the teeth, mix with food and make acid. You cannot see plaque unless you stain it.

Plate A set of false teeth.

Premolars The teeth between the molars and the canine teeth; bicuspids.

Prenatal Before birth.

Prevention Action taken to stop sickness before it starts.

Probe An instrument for examining teeth for tartar or other problems.

Protective foods Foods that are rich in vitamins and minerals. They help build healthy bodies and make people more able to resist or fight diseases. In this book they are called GLOW foods.

Proteins Body-building foods necessary for proper growth and strength. In this book they are called GROW foods.

Pus A yellow-white liquid found inside infections.

R

Records, reports Written information about sick persons and the treatment they receive. Records are for the personal use of the health worker, reports are written by one health worker to another to describe an illness and ask for further treatment.

Resistance The ability of something to defend itself against something that would normally harm or kill it. Many bacteria become resistant to the effects of certain antibiotics.

Rinse To hold a liquid in the mouth, moving around inside the mouth.

Risk The possibility of injury, loss, or harm. Danger.

Root The lower part of the tooth, under the gum, connected to the bone.

Root canal The hollow part of every root of a tooth, which has a blood vessel and a nerve inside.

Root canal treatment A special operation on a dead tooth to remove material from the root canal and replace it with filling material.

Root fibers Tiny fibers which hold the root of the tooth to the jaw bone.

S

Saliva Spit. Saliva helps us to swallow our food.

Scab The crust of dry blood that forms over a wound.

Scale To scrape the tartar off the teeth. A scaler is an instrument for scaling.

Scientific method A way of learning something. It begins with information, then an idea, and then the idea is tested against the information available.

Side effects Problems caused by using a medicine.

Signs The things or conditions to look for when you examine a sick person, to find out what sickness the person has. In this book the symptoms (the problems a person feels) are included with signs.

Sinus A hollow place inside the bone.

Socket The wound left after you take out a tooth.

Soft drinks Fizzy, carbonated drinks like Coca-Cola.
Spatula  An instrument used for mixing cement for fillings.

Starches  Energy foods like maize, rice, wheat, cassava, potatoes, and squash.

Sterilize  To kill or remove all the germs from something (for example, a tool). This can be done by baking or pressure steaming.

Sugars  Sweet foods like honey, sugar, or fruit that give energy but often cause tooth and gum problems.

Survey  A collection of facts about a small group of persons or things in the community. If the small group is not unusual, the survey results will describe the whole community.

Suture  A stitch made with needle and thread to sew up an opening or wound.

Swelling  An area of the skin that is abnormally large, puffed up. A swollen area is one that has swelling.

Symptoms  The feelings or conditions that sick persons report about their sickness. In this book, symptoms are included with signs.

Syringe  An instrument with a small sharp needle, for giving injections.

Top of the tooth  The part of the tooth that bites on food. For both upper and lower teeth, the biting surface is the top and the root is at the bottom.

Topical  On top of the skin. A topical medicine is put on the skin.

Traditions  Practices, beliefs, or customs handed down from one generation to another by example or word of mouth.

Treatment  Care given by a health worker to fight an illness, attend to an injury, or prevent a new problem.

Tropical  Having to do with the tropics—the hot regions of the world.

Tumor  An abnormal mass of tissue without inflammation. Some tumors are due to cancer.

Tweezer  Small metal instrument for picking up cotton or small objects. Some persons use the word forceps for tweezers, but in this book, forceps are instruments for taking out a tooth.

Ulcer  A break in the skin or mucus membrane; a chronic open sore that can appear on the skin, gums, or gut.

Vaccinations  See Immunizations.

Vaseline  See Petroleum jelly.

Vessels  See Blood vessels.

Virus  Germs smaller than bacteria, which cause some infectious diseases, like measles or the common cold.

Vitamins  Ingredients in fruits and vegetables that our bodies need to work properly.

Volume  The amount of space a thing occupies. We measure volume in liters, ml, gallons, etc.

Weight  The heaviness or lightness of a thing. We measure weight in kilograms, mg, pounds, etc.

Wisdom teeth  The 3rd molars, which grow into the mouth when a person is 16 to 22 years old.

X-ray  A special photograph that allows you to see bone, roots of teeth, etc., under the skin.
INDEX

A

Abscess, 93, 225
  and gum bubble, 74
  begins with a cavity, 6, 47
  diagnosis and treatment, 93
  flip chart presentation, 30-31
  treat at once before infection reaches the bone, 6
  treat pregnant people, now, 15-16
Acetaminophen (See Paracetamol)
Acid
  causes tooth decay and gum disease, 7, 50, 225
  some sugars make acid more easily, 55
Adrenaline (See Epinephrine)
AIDS, Chapter 12, 175
  (See HIV)
Alcohol, for disinfecting, 89
Allergies to medicines
  and extractions, 159-160
  warning about antibiotics, 209
Amoxicillin, 94, 95, 188, 191, 193
  with clavulanic acid, 190
  dental kit supply, 208
  during pregnancy, 191
Ampicillin, 94, 105
Anemia, 16, 105, 123, 225
Anesthetics, local, 135-142
  dental kit supply, 211
Antibiotics, 93-94, 95, 209
  precautions, 209
  take entire dose, 94, 209
Antiretroviral therapy (ART), 177, 194
Arkansas stone, 128
Aspirating syringe, 136, 213, 225
Aspirin, 94
  correct dose for pain, 94-95, 209
  dental kit supply, 208
  do not hold against teeth, 209
Atraumatic Restorative Treatment, 92, 144, 152-155

B

Baby teeth, 62-65
  ages when baby teeth come in, 43, 64
  begin forming before birth, 62
  do not cause diarrhea and fever, 65
  how baby teeth grow and stay strong, 63
  knocked out: diagnosis and treatment, 97
  loose, 54
  make space in mouth for permanent teeth, 64
  marks on baby teeth, 62
  why baby teeth are important, 64
Bacteria (See Germs)
Bandage, head, for a broken jaw, 110
Berry juice
  used to show coating of germs on teeth, 53
Bicycle-powered dental drill, 156
Bleeding
  and extractions, 77, 159-160
  from socket: diagnosis and treatment, 118
  how to place a suture, 167-168
  in the mouth: possible causes (chart), 116
Bleach, for disinfecting, 89
Blood
  sterilize any instrument that has touched blood, 87
  (Also see Bleeding)
Blood pressure, 77, 118
Blood vessel, 46
Bone
  bone chips inside tooth socket, 172
  broken: diagnosis and treatment, 108-112
  damage from gum disease, 42
  three main bones in the face, 108
Bones of animals, 41
Books on dental care, 221-223
Bottle feeding, 3, 63
Breast feeding, good for teeth, 3
Broken bone, 108-112
Broken root, 171
Broken tooth, 96
“Brush it!” (game), 50-51
Brushing teeth (See Cleaning teeth)
Brushstick (homemade toothbrush), 4
Bubble (See Gum bubble)
Bupivacaine, 136, 137

C

Cancer, 125, 226
  can begin with white lines inside mouth, 105
  diagnosis, 125
  Kaposi’s Sarcoma, 194
  look for a sore that does not heal, 106
Candy, 9
  (Also see Sweet foods)
Cancrum oris (noma)
  diagnosis and treatment, 121-124, 191
Canker sores, diagnosis and treatment, 106
Cartridges of injectable anesthetic, 135-136, 211
Cavities (caries), 226
can begin as marks on baby teeth, 62
can become abscesses, 47
can make teeth hurt, 46
causes sometimes by baby bottles, 3
diagnosis and treatment, 92
flip chart presentation, 30-31
on neck of tooth, 92, 211
puppet show about, 33-34
school survey, 49
treat cavities before abscess forms, 6
Cement fillings (See Fillings)
Cephalexin, 119
Chair for examinations and extractions, 75, 162
Cheek bone, 108
Child-to-Child program, 24
Children
as health workers, 24
can clean their own teeth, 58
cannot learn well if their teeth hurt, 20
want to learn, 19
young children should not take aspirin, 94, 209
Chlorhexidine gluconate, 185, 187
Cleaning instruments, 87-91
after filling a cavity, 151
after scaling, 134
(Also see Disinfecting instruments, Sterilizing instruments)
Cleaning teeth, 56, 69-72
can help sore gums, 7
Child-to-Child activities, 24, 53
especially important for persons who take certain medicines, 115
experiment to find the best way, 58
flip chart presentation, 31
how to clean a baby's teeth, 63
how to clean between teeth, 71-72
how to make a brushstick, 4
how to make a child's toothbrush, 63
how to make waxed floss, 216
make it part of a daily school activity, 59
parents should clean children's teeth, 11, 18, 63
pregnant people must take special care, 16
protected areas that are hard to clean, 4
soft toothbrush is best, 4, 70
(Also see Gum disease, Scaling teeth)
Clindamycin, 123, 190, 191
during pregnancy, 191
Clostrimazole, 187
Coating of germs on the teeth, 50
Cola drink, in experiment on decay, 48
Cold sores (fever blisters)
diagnosis and treatment, 104, 192-193
Colonies of germs on the teeth, 50, 226
Comparative diagnosis (telling similar problems apart), 80-83
Cotrimoxazole, 184
Cotton rolls, 147, 211
Cowhorn forceps, 161
do not use on baby teeth, 166
Curette (for scaling teeth), 128

D
Demonstration, 26, 48
Dental floss, 71-72, 216
Dental kit, supplies for, 207-217
Dental mirror, 75, 215
Dental tools (See Instruments)
Dental workers, can visit schools, 35
Dentures, 169-170
bad dentures cause sore mouth, 107
sores under, diagnosis and treatment, 106
Diabetes
and extractions, 159-160
and thrush, 105
Diagnosis (See Examination and diagnosis)
Diagnosis charts, 80-83
loose tooth, 81
sore mouth, 82
sores 82-83
swelling, 81
toothache, 80
trouble opening or closing mouth, 83
(Also see Comparative diagnosis)
Dicloxacillin, 119
Diet (See Nutrition)
Dilantin (diphenylhydantoin), 115
Dislocated jaw
after extraction, 173
diagnosis and treatment, 113
Disinfecting instruments, 89
after scaling, 134
by boiling, 89
with chemicals, 89
dental kit supply of disinfectant, 212
disposable syringes and needles, 91
Doxycycline, 188, 193
during pregnancy, 63, 77
Drama, for teaching about tooth problems, 26
Drawing pictures, 31
Drill, dental, 156-157
Dry socket, diagnosis and treatment, 117

E
Elevators for extractions, 161-162, 213
how to use, 164
Epilepsy
and swollen gums: diagnosis and treatment, 115
Epinephrine (adrenaline), 209
  in anesthetic, 136, 137, 160
Epulis, 133
Erythromycin, 94, 188, 193
dental kit supply, 208
Eugenol (oil of cloves), 146, 211
Examination and diagnosis, Chapter 6, 226
  bleeding in the mouth (chart), 116
different problems come at different ages, 78
  examining inside the mouth, 79
  four steps to a good diagnosis, 76
  and HIV, 180-182
  how to check the gums, 74
  look for sores, 74
  questions that help you make a diagnosis, 73, 76
telling similar problems apart, 80-83
  tetanus, 118
touch the sore place, 79
wear protective equipment, 180
where to examine, 75
(Also see Diagnosis charts)
Excavator, 146
Expiration date, 226
Extractions, Chapter 11
  before you begin—ask questions! 159
four problems to watch for, 160
how to take out a tooth, 163-169
instructions: what to do afterward, 169-173
  instruments needed, 160-162
for people with HIV, 183
pregnant people need not wait, 15-16, 77
problems afterward, 116-117, 171-173
three reasons to take out a tooth, 159

F
False teeth, 169-170
(Also see Dentures)
Fever blisters,
diagnosis and treatment, 104, 192-193
Filling teeth to correct a bad bite, 99
Filling tool, 146
Fillings, Chapter 10
cement filling material, 146, 211
glass ionomer filling material, 152
how to place a permanent filling, 152-155
how to place a temporary filling, 147-151
  instructions for after you place a filling, 151
instruments needed, 146
kinds of fillings, 144
lost or broken: diagnosis and treatment, 92-93
permanent fillings, 152-157
puppet show about, 33-34
what a filling can do, 145
when not to place a filling, 144
  when to place a filling, 144
Fish bone
can get caught under gums, 133
Flannel-boards, 28, 226
Flesh, left inside socket after extraction, 172
Flip charts, 29-31, 226
  example, 30-31
Flossing (cleaning between teeth), 71-72, 216,
  226
Fluconazole, 187
Fluoride, 24, 70, 224
  on neck of tooth, 92, 211
  rinse and paste to prevent cavities, 211
Food (See Nutrition)
Forceps for extractions, 161, 213
Fracture (See Broken bone, tooth, root)

G
Game ("Brush it!")”, 50-51
Generic name, 208
Germs, 227
discussion about, 51
  health workers must not spread germs, 85-87
  impossible to kill all germs in mouth, 50
  where they hide, 87
Gingivae, gingivitis (See Gums, Gum disease)
Glass ionomer, 152
Gloves, 86, 180, 206
“Go foods” (energy foods), 67-68
  warning about, 68
Grooves on teeth, 92, 211, 227
Gum boil (See Gum bubble)
Gum bubble, 47, 74
Gum disease, 52-53
description, 42, 52
  diagnosis and treatment, 101-103
  flip chart presentation, 30-31
  home care for, 53
  how gum disease makes teeth fall out, 42
  learning activity about, 53
  noma: diagnosis and treatment, 121-124
  picture of, 7
  possible cause of a sore mouth, 82
  prevent gum disease during pregnancy, 16
  serious gum disease: diagnosis and
treatment, 8, 102-103, 121-124
Gum pocket, 52, 131, 227
Gums
definition, 227
  importance of, 1, 37
  infected gums (noma): diagnosis and
treatment, 121-124
Index G-H-I-J-K-L-M

healthy and unhealthy gums: description, 52
how to examine, 74
swollen gums and epilepsy medicine, 115
swollen gums and pregnancy, 16, 77, 102
why gums can feel sore, 7, 52

H

Hands
wash before you touch someone’s mouth, 86

Hatchet, 148

Head bandage for a broken jaw, 110

Heart disease, and extractions, 159-160

Heat, can lower swelling, 94

Hemorrhage, and extractions, 159-160

Hemostat, 167

Herpes virus, can cause fever blisters, 104, 192-193

High viscosity glass ionomer, 152

HIV, Chapter 12, 175
common problems, 184
definition, 177
dental care, 183
and food, 195
how it spreads, 178
general treatments, 184-185
prevention, 197-201

Hydrogen peroxide, 8, 185
warning: do not use too much, 8

Hygiene (keeping clean), 82-85, 86-90, 184-185

Incisors, 39

Infection, 227
can pass from tooth to bone, 47
dental workers can infect others, 85
description of infected gums, 52
during pregnancy, 15-16, 77
in sinus: diagnosis and treatment, 95
in spit gland: diagnosis and treatment, 119

Injections, Chapter 9, 210, 227
how to give injections to children, 141
injections of antibiotics, 210
instructions for after you give an injection, 142
safe disposal, 205
sterilization of syringes, 138
two types of syringe, 135-136
use an aspirating syringe, 138

Instructions
what to do after extracting, 169-173
what to do after injecting, 142
what to do after placing a temporary
filling, 151
what to do after scaling, 133

K

Kaposi’s Sarcoma, 194
Ketoconazole, 187

L

Learning (See Teaching)

Lidocaine (lignocaine), 136
dental kit supply, 211

Ligature wire, 110, 227

Loose teeth, 54
diagnosis and treatment, 99
possible causes (charts), 81, 99

M

Main food, 67-68
Malaria, can contribute to noma, 121

Malnutrition, 227
cavities can help cause, 62
often made worse by Vincent’s Infection, 102
Also see Nutrition

Mango string, can get caught under gums, 133

Measles
can cause dry, sore lips, 107
can contribute to noma, 121
**Medicines** in dental kit, 207-210

Other Books from Hesperian

Where There Is No Doctor, by David Werner with Carol Thuman and Jane Maxwell. Perhaps the most widely used health care manual in the world, this book provides vital, easily understood information on how to diagnose, treat, and prevent common diseases. Emphasis is placed on prevention, including cleanliness, diet, and vaccinations, as well as the active role people must take in their own health care. 512 pages.

Where Women Have No Doctor, by A. August Burns, Ronnie Lovich, Jane Maxwell, and Katharine Shapiro, combines self-help medical information with an understanding of how poverty, discrimination and culture can limit women's health & access to care. This book is essential for any woman who wants to improve her health, & for health workers who want more information about the problems that affect only women or that affect women differently from men. 600 pages.

Helping Children Who Are Blind, by Sandy Niemann and Namita Jacob, aids parents and other caregivers in helping blind children develop all their capabilities. Topics include: assessing how much a child can see, preventing blindness, moving around safely, teaching common activities, and more. 200 pages.

Helping Children Who Are Deaf, by Sandy Neimann, Devorah Greenstein and Darlena David, helps parents and other caregivers build the communication skills of young children who do not hear well. Covers language development through both signed and spoken methods, assessing hearing loss, exploring causes of deafness, and more. 256 pages.

Disabled Village Children, by David Werner, covers most common disabilities of children. It gives suggestions for rehabilitation and explains how to make a variety of low-cost aids. Emphasis is placed on how to help disabled children find a role and be accepted in the community. 672 pages.

A Health Handbook for Women with Disabilities, by Jane Maxwell, Julia Watts Belser, and Darlena David. The social stigma of disability and inadequate care are often greater barriers to health than the disabilities themselves. This groundbreaking handbook provides suggestions on daily care, family planning, violence and abuse, pregnancy and childbirth, disability-friendly health care, and more. 416 pages.

Helping Children Live with HIV, by Susan McCallister, Zoe Marinkovich, and Todd Jailer, is designed to empower families and others to support young children affected by HIV. Helping Children Live with HIV is full of clear information, activities and stories. It provides practical guidance to promote early childhood development through meeting the physical and psychosocial needs of children made vulnerable by HIV. 320 pages.
A Community Guide to Environmental Health, by Jeff Conant and Pam Fadem, helps urban and rural health promoters, activists, and others solve environmental problems to improve health. 23 chapters with dozens of activities and instructions provide information about reducing harm from pollution, protecting water and watersheds, farming sustainably, managing solid and health care waste, and more. 640 pages.

A Book for Midwives, by Susan Klein, Suellen Miller, and Fiona Thomson, is for midwives, community health workers and anyone concerned about the health of women and babies in pregnancy, birth and beyond. It includes: helping pregnant women stay healthy, care during and after birth, handling obstetric complications, breastfeeding, and expanded information for women’s reproductive health care. 544 pages.

Workers’ Guide to Health and Safety, by Todd Jailer, Miriam Lara-Meloy and Maggie Robbins, makes occupational safety and health accessible to those most affected by hazards — the workers themselves. An invaluable resource for training workers, supervisors, and safety committees, and in courses on labor relations. 576 pages.

Health Actions for Women, by Melissa Smith, Sarah Shannon and Kathleen Vickery, was field tested by 41 community-based groups in 23 countries and provides a wealth of clearly explained and engagingly illustrated activities, strategies and stories that address the social obstacles and practices that prevent women and girls from enjoying healthy lives. 352 pages.

Recruiting the Heart, Training the Brain, by America Bracho, Ginger Lee, Gloria P. Goraldo and Rosa Maria De Prado, tells the story of how Latino Health Access developed its groundbreaking model of peer-to-peer outreach and education in Santa Ana, California to address health problems exacerbated by poverty and discrimination. Their strategies and accomplishments will inspire change across an increasingly unhealthy America. 288 pages.

Doing Global Health Work: Approaches that Really Make a Difference, by Kirk Scirto. Using decades of experience to examine the pitfalls of traditional volunteer approaches and the benefits of a more empowering approach, Scirto guides health and development professionals toward sustainable, evidence-based global health work. 244 pages.
