A Book for Midwives

Care for pregnancy, birth, and women’s health

Susan Klein, Suellen Miller, and Fiona Thomson

hesperian health guides
Berkeley, California, USA
Hesperian encourages you to copy, reproduce, or adapt any or all parts of this book, including the illustrations, provided that you do this for non-commercial purposes, credit Hesperian, and follow the other requirements of Hesperian’s Open Copyright License (see www.hesperian.org/about/open-copyright).

For certain kinds of adaptation and distribution, we ask that you first obtain permission from Hesperian. Contact permissions@hesperian.org to use any part of this book for commercial purposes; in quantities more than 100 print copies; in any digital format; or with an organizational budget more than $1 million US dollars.

We also ask that you contact Hesperian for permission before beginning any translation, to avoid duplication of efforts, and for suggestions about adapting the information in this book. Please send Hesperian a copy of any materials in which text or illustrations from this book have been used.

This book can be improved with your help. We want to hear about your experiences, traditions and practices. If you have any suggestions for improving this book, or making it better meet the needs of your community, please write to hesperian@hesperian.org. Your comments will help make future editions more useful. Thank you for your help.
The first edition of this book was imagined, written, and illustrated by Susan Klein. Sadly, she died before it was published. This new revision is still carried largely by her writing, her drawings, and we hope, her vision — that *A Book For Midwives* would be a tool enabling all those who attend women in childbirth, regardless of their educational background, to exercise independent judgment and to make the best possible decisions at each birth.
Thanks

Only with the collaboration of hundreds of advisors, reviewers, writers, artists, and others was it possible to create this book.

Every staff member, intern, and volunteer here at Hesperian Health Guides helped bring this book into the world, including those who raise funds, manage finances, publicize our books, and pack and ship them around the world. Outside our office, dozens of reviewers helped decide what this book should cover and how to do it. Groups of midwives and midwifery students in 10 countries critiqued early versions to make it as useful, appropriate, and accurate as possible. Midwives, doctors, and other health workers, trainers, and specialists volunteered their time to ensure the accuracy and clarity of the material here.

Along with our tireless medical editors, we called on a few reviewers over and over again, and they deserve special mention here. Thank you Deborah Billings, Lisa de Avila, Ruth Kennedy, and Karen Strange.

The following organizations contributed time, resources, and critical thinking: Averting Maternal Death and Disability (AMDD) in the US; ASECSA in Guatemala; The Bangladesh Women’s Health Coalition; The Berkeley Midwives Study Group in the US; El Centro Para los Adolescentes de San Miguel de Allende (CASA) in Mexico; Centre For Rural Studies and Development in India; El Centro de Atención Integral de la Pareja in Mexico; The International Confederation of Midwives; The Integrated Midwives Association of the Philippines; Inuulitsivak Maternity Center in Canada; Ipas in the US, Ghana, and Kenya; Ixmucane and Midwives for Midwives in Guatemala; Jamkhed Comprehensive Rural Health Program in India; Kampot Hospital Maternity Center in Cambodia; the Maryknoll Sisters and the VEMA training center of Tanzania; Pathfinder in Peru; and the Reproductive Health Research Unit at the University of the Witwatersrand, Chris Hani Baragwanath Hospital in South Africa.

Thanks to the following publishers who gave us permission to use drawings: Family Care International, from Healthy Women, Healthy Mothers; Freedom From Hunger; and Pesticide Action Network Asia and the Pacific, from Breaking the Silence! Plantations and Pesticides.

Our deep gratitude goes to everyone who gave their time, thoughts, and knowledge so generously, both to the original edition of A Book for Midwives and to this revision. Your commitment to health for all is what brought this book into the world. Thank you:

A Book for Midwives (2020)
Finally, thank you so much to the individuals and foundations who financially supported this project: Allan S. Gordon Foundation; Anna Lalor Burdick Program of the Lalor Foundation, Inc.; Averting Maternal Death and Disability Program, Heilbrunn Center, Mailman School of Public Health, Columbia University; Compton Foundation, Inc.; Conservation, Food and Health Foundation, Inc.; David and Lucile Packard Foundation; Dorothy and Jonathan Rintels Charitable Foundation; Erik E. and Edith H. Bergstrom Foundation; Ford Foundation; International Confederation of Midwives; Jadetree Foundation; Jeanne Kemp; Salt-Bush Fund of the Tides Foundation; Ruth Sherer; and the United Nations Population Fund.
How to use this book

Finding information
To find information, use the Contents, the Index, or the Tabs.

The Contents at the beginning of this book list the name of each chapter in the order in which it appears. Contents of each chapter are also listed at the beginning of that chapter.

The Index at the back of this book lists all the topics covered in this book in the order of the alphabet (a, b, c, d...).

Each page in this book has a number at the bottom. To find a chapter or topic in this book, find it in the contents or index, and then turn to the page number listed next to it.

Tabs on the right-hand pages separate most of the book into 5 sections. You can quickly find the information on staying healthy, infection prevention, pregnancy, labor and birth (including postpartum), and on other health skills, by turning to the sections labeled with those tabs.

Warnings, medicines, and notes
Warnings, medicines, and notes are separate from the main text.

Warning boxes show very important information. When you see this kind of box, you must take action to avoid danger.

**WARNING!** Do not insert an IUD for a woman who has signs of infection. The infection can spread to the womb.

Medicine boxes show how to give medicines. Read these boxes very carefully, and always look in the green medicines pages starting on page 467 before giving a medicine.

To lower a fever
- give 500 to 1000 mg paracetamol........................................ by mouth, every 4 to 6 hours.

Notes show information that is useful, but not directly connected with the information around it.

**Note:** Clean hands do not stay clean for long. If you touch anything other than the mother’s genitals, you must wash again.
Understanding pictures of the body

How we show the outside of the body
When we draw a person, we try to draw her whole body. If we do not have enough room, we only show part of her body.

How we show the inside of the body
Sometimes we need to show what is happening inside a woman’s body. So we include pictures that show what a woman’s body would look like if you could see inside of her.

A note on language
Medical and technical words Throughout this book, we try to use easily understood words for parts of the body and things that the body does. We also explain the medical words we use. If there is a medical or technical word you do not understand, you can look it up in the index and see if it is explained in the book. Or you can look in the glossary on page 507, which lists some medical and technical words that are useful to know.

He and she When talking about babies, we did not want to say “he or she” each time because it can be awkward. So sometimes we say “she,” and sometimes we say “he.”

Getting help
The information in this book is not always enough to help you solve a health problem. When this happens, get help! Depending on the problem, you should:

Get medical advice. A skilled health worker or doctor should be able to help you decide what to do. This is not usually an emergency.

Get medical help. The woman or her baby need to see a skilled health worker or doctor for tests or treatment as soon as possible.

Go to a medical center or hospital. There is an emergency. Take the woman or her baby to a hospital right away for surgery or other immediate help.
